NET NAMING

General patterns are named for what they join

Subnet, IP-like needs at that IP join e.g. `192.168.1.0/24`

Subnet, IP endpoint of a series join e.g. `192.168.1.0/24_M`

Subnet, entire top between Subnet/subnet e.g. `192.168.1.0/24_01`

all others are explicit design note

[illegible]
