

[illegible]

The diagram illustrates the CRISPR-Cas9 system and its application in genome editing. It shows the organization of the CRISPR-Cas9 locus, including the CRISPR array, the Cas9 gene, and the tracrse and crRNA genes. The process of Cas9 binding to the crRNA and the target DNA sequence is shown, followed by the cleavage of the DNA. The resulting fragments are then ligated together, creating a permanent deletion. The diagram also shows the process of Cas9 binding to the crRNA and the target DNA sequence, followed by the cleavage of the DNA. The resulting fragments are then ligated together, creating a permanent deletion.

The figure illustrates the internal architecture and external connections of the PH-2 class-D audio amplifier. The top section shows the internal block diagram, which includes a VSP3 input stage, two comparators (RTXLRP and RTXRRP), and the PH-2 core with P1 and P2 output stages. The bottom section shows the external component connections: CTLLCP and CTXRRP capacitors connected to the 100V input and output respectively, and the AGND connection.
