Pin connection diagram for the JSWDCARD module:

- SWCLK_CARD (Pin 3) connects to CLK
- SWDIO_CARD (Pin 2) connects to DIO
- NRST_CARD (Pin 4) connects to RST
- GND connects to GND
- VDD connects to VDD

The schematic diagram illustrates the internal structure of the UBKCARD module. The module is a central black box with four pins: 1 (BOOT), 2 (SW), 3 (EN), and 4 (FB). The connections are as follows:

- Pin 1 (BOOT):** Connected to a V15 voltage source.
- Pin 2 (SW):** Connected to a TPS54202 DC-DC converter.
- Pin 3 (EN):** Connected to a CBKICARD component.
- Pin 4 (FB):** Connected to a CBKOCARD component.
- Internal Connections:**
 - A CBSTCARD component is connected between the SW pin and the EN pin.
 - A RBKF1CARD component is connected between the EN pin and the FB pin.
 - A RBKF2CARD component is connected between the FB pin and the SW pin.
- Grounding:** The module is connected to a common ground plane labeled DGND.
